

## Reliable and Reusable Test Automation ... With *MINIMAL* coding and maintenance

### What TAAS does for software test automation:

- ***Dramatically reduce test framework/script CODING & maintenance:*** STOP paying to code your application TWICE! With TAAS, you no longer have to re-create application logic to test the application.
- ***Optimized configuration for YOUR application:*** Functional toolsets today are sold as a 'one size fits all'. TAAS **specifically configures** your application under test (AUT) using a proprietary process.
- ***Test your AUT like an End-User/Client:*** ...NOT like an engineer or programmer. TAAS translates your most important AUT business into prioritized test transactions.
- ***Automatically generate Test Scripts:*** The TAAS test architecture is a one time setup – allowing global utilization thereafter. Test scripts are generated automatically using the TAAS architecture. TAAS's Test Data Generator automatically produces hundreds of parameterized data variation test in seconds.

### REDUCE TESTING:

- TIME
- CODING
- WORKLOAD

### Return on investment (ROI)\* from TAAS:

- ***Manual to TAAS: 80% to 90% ROI***
- ***Optimized Automation: 35% to 85% ROI***
- ***Better Quality: 76%*** reduction in production bugs.

\*ROI calculated in time savings.
