

Test Lab Services

Whether testing the latest SOA application or a legacy mainframe application undergoing conversion, Telesis's state of the art Test Facility supports all your testing needs. Our single test platform, with automated test scripts, can support unit test, systems test, UAT or regression testing, with real world, end to end test transactions. All at offshore rates. Our seasoned professionals will optimize your test schedules, requirements management, test processes and defect management, providing your enterprise with enormous business transformation cost savings.

Our automation support services concentrate on pragmatic approaches to your testing needs. We engineer testing solutions that make sense for streamlined, fast paced businesses. Telesis can develop a tailored solution for immediate results, while providing a foundation for continuous improvement and long-term strategic goals.

Our 24-point QA Assessment identifies gaps within an application or enterprise test process. We recommend the most pragmatic method for resolving the gaps and provide a process change roadmap that ultimately creates a best-of-breed test platform. A recent client reduced its test cycle schedule by 48%, allowing it to find and fix defects twice as fast. Assessment services support both Sarbanes-Oxley and IT Governance requirements.

Migrating from a manual testing process to an automated process is a significant challenge. Telesis assists companies to select the right tools, training, and implementation or integration with existing testing processes. We also help our clients establish a library of automated test scripts that are practical, flexible and repeatable.

Telesis delivers performance management solutions through "real world," end-to-end load performance testing and functional testing. We also support Web and e-commerce applications, including performance and load testing at your anticipated user concurrency levels.
